Relax and Unwind: We're Sprucing Things Up for You!

ABOUT PROJECT

Fullerton market is a financial company that focus on trades, investments, education, sponsorships and partnerships. Their target audiences are brokers, money managers, white labels and strategy providers.

One of my internship projects is to design a app based on Fullerverse. There is already an existing website (fullerverse.io) but it is currently under maintenance.

THE PROBLEM

Fullerverse originally have an info graphic and a website containing information about their awards, but it is not descriptive enough for partners to understand, especially new traders/IB partners. The traders and IB partners would also have no way of tracking their progress unless they keep track of them manually or contact the company.

PROBLEM STATEMENT

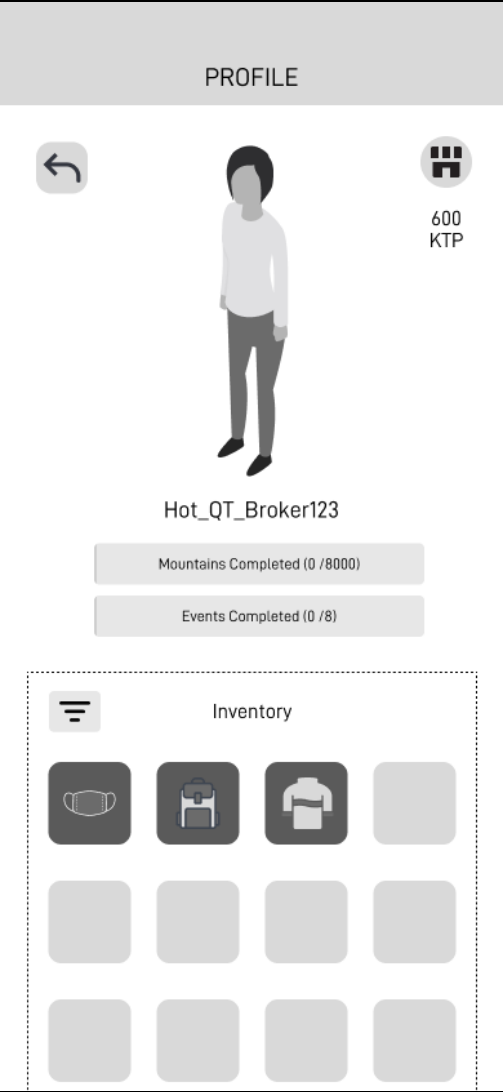

How can we encourage usage and make it easier for partners to keep track of their progress with Fullerverse?

SOLUTION

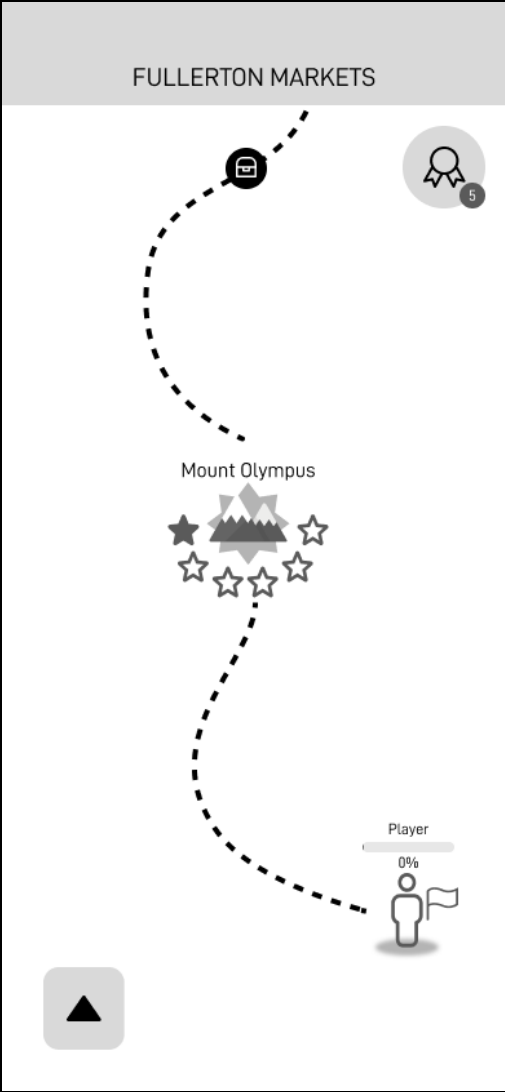

We can try to gamify Fullerverse with game currency, NFT items and exp to improve user's engagement. With mission/award, user will also be able to keep track of their progression and rewards.

WIREFRAME VERSION 1

After a team discussion about the app's features and theme, I designed the initial wireframe prototype using Figma. In alignment with the company's branding, we are incorporating the same colour scheme used on their website into our app at their request.

HIGH FIDELITY PROTOTYPE

The final prototype iteration was built upon the foundation of Wireframe V2, incorporating minor adjustments while maintaining the overall page structure.

HIGH FIDELITY PROTOTYPE

Subsequently, the high-fidelity prototype was developed in response to feedback gathered during team discussions and internal playtesting. We initially implemented the only dark mode for the app, but then decided to create the light mode too.
