Appointments & Clinic Onboarding

About Halza and myHalza

- Halza is a medical app used by patients to manage, secure, track and share their medical records, personal information and documents, with family, friends and doctors.
- myHalza is a website portals used by businesses (clinics/hospitals) to manage their clients, staff and medical records more efficiently.

Background

Appointment Integration Between Two Platforms

In the Halza app, the initial appointment feature requires patients to scan a barcode to fill up a form and make payment, but this feature does not include **a way for patients to keep track of their appointment requests, nor their status.**

Clinics, hospitals, doctors and nurses can manage the records of patients and staff through myHalza web portal, **but they are not able to manage their clients' appointment requests in the website.** Thus, they are required to use external softwares to manage their appointments.

I was brought in to lead this project where I needed to improvise and integrate the appointment feature between the Halza app and the myHalza portal, as well as revamp design for myHalza Clinic Onboarding.

Challenges

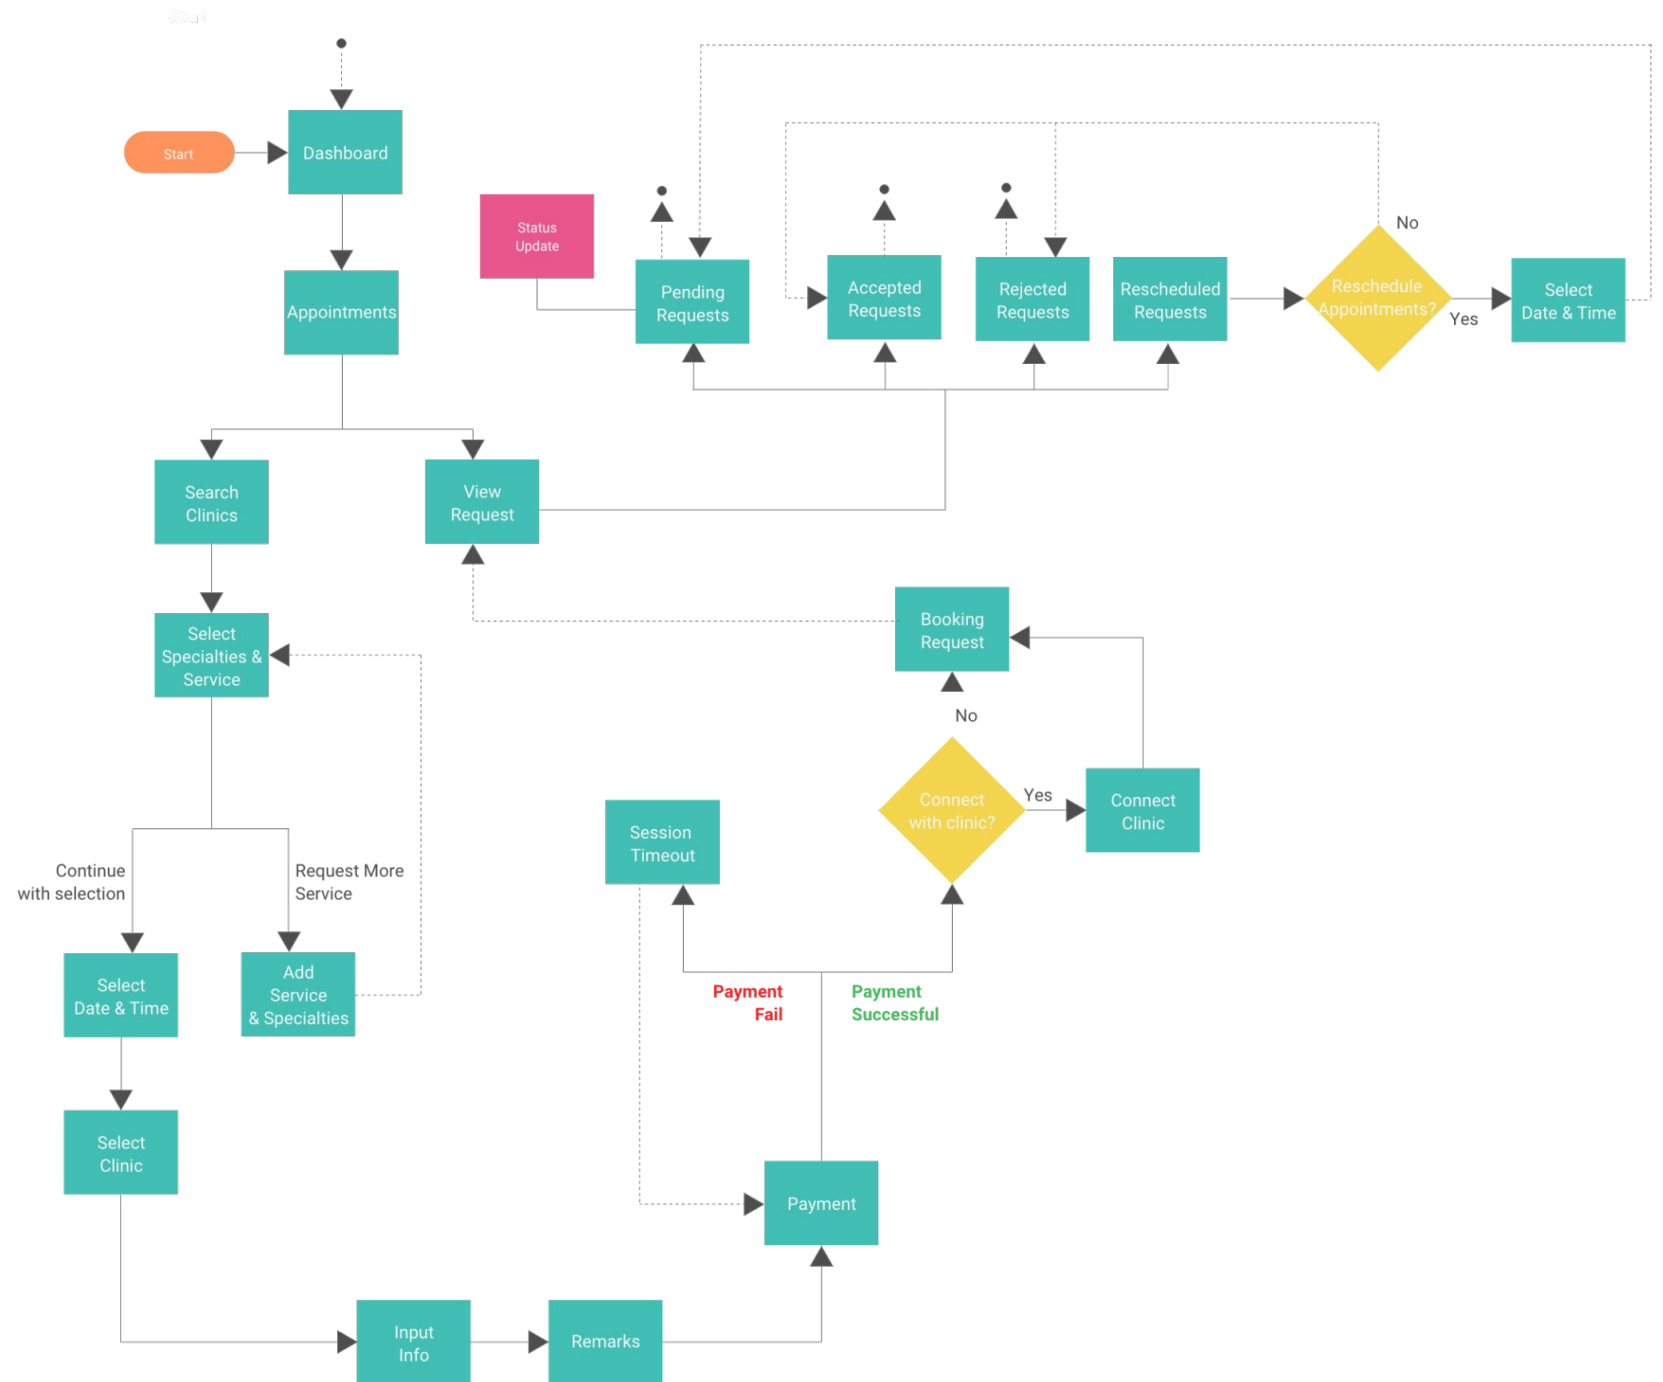

- The two platforms (web portal and app) were originally developed separately for different clients (B2B and B2C).
- The new revamp design for Halza Appointments would also have to match with the myHalza Appointments logic in-order for the integration to work seamlessly between the feature.
- Appointments for myHalza will also be an entirely new design as the feature was not present in myHalza portal previously.
- Other changes were also made in myHalza Clinic Profile and Clinic Onboarding due to the design changes made for Halza app.

Problem Statements

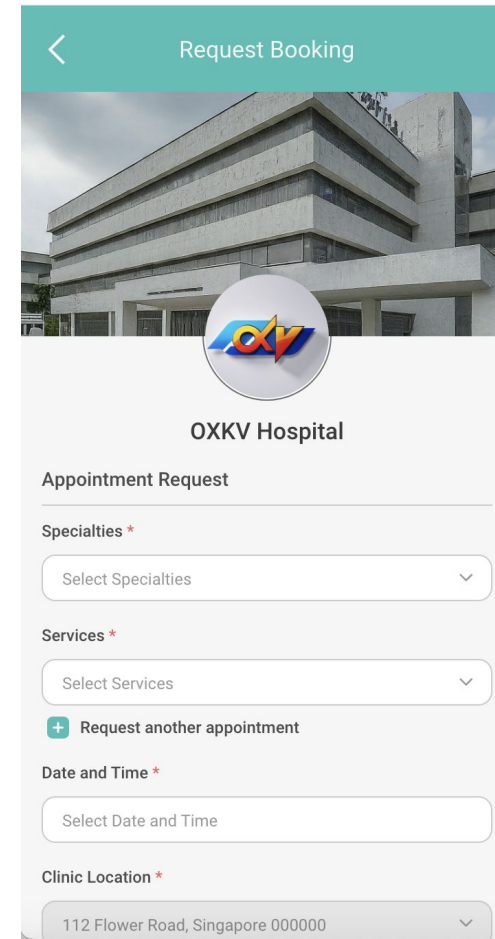

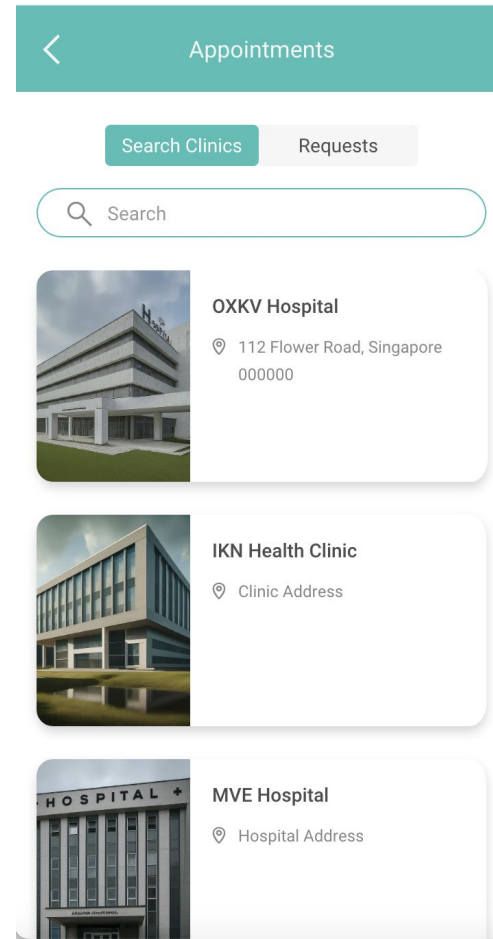

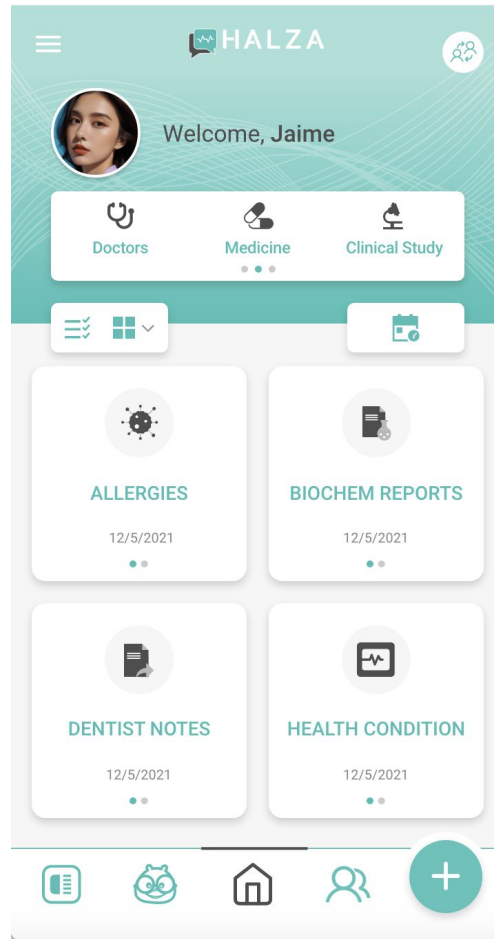

Based on the **requirements for the integration and current problems faced**, our problem statements for both the app and web portal would be...

- How can we make it easier for patients to request and track their appointments?
- How can we make it easier for hospitals/clinics to manage their client's appointments?

Clicking pending will display a list of pending appointments at a panel on the right.

Users will be directed to the requested date of an appointment in the daily view once view appointments is click.

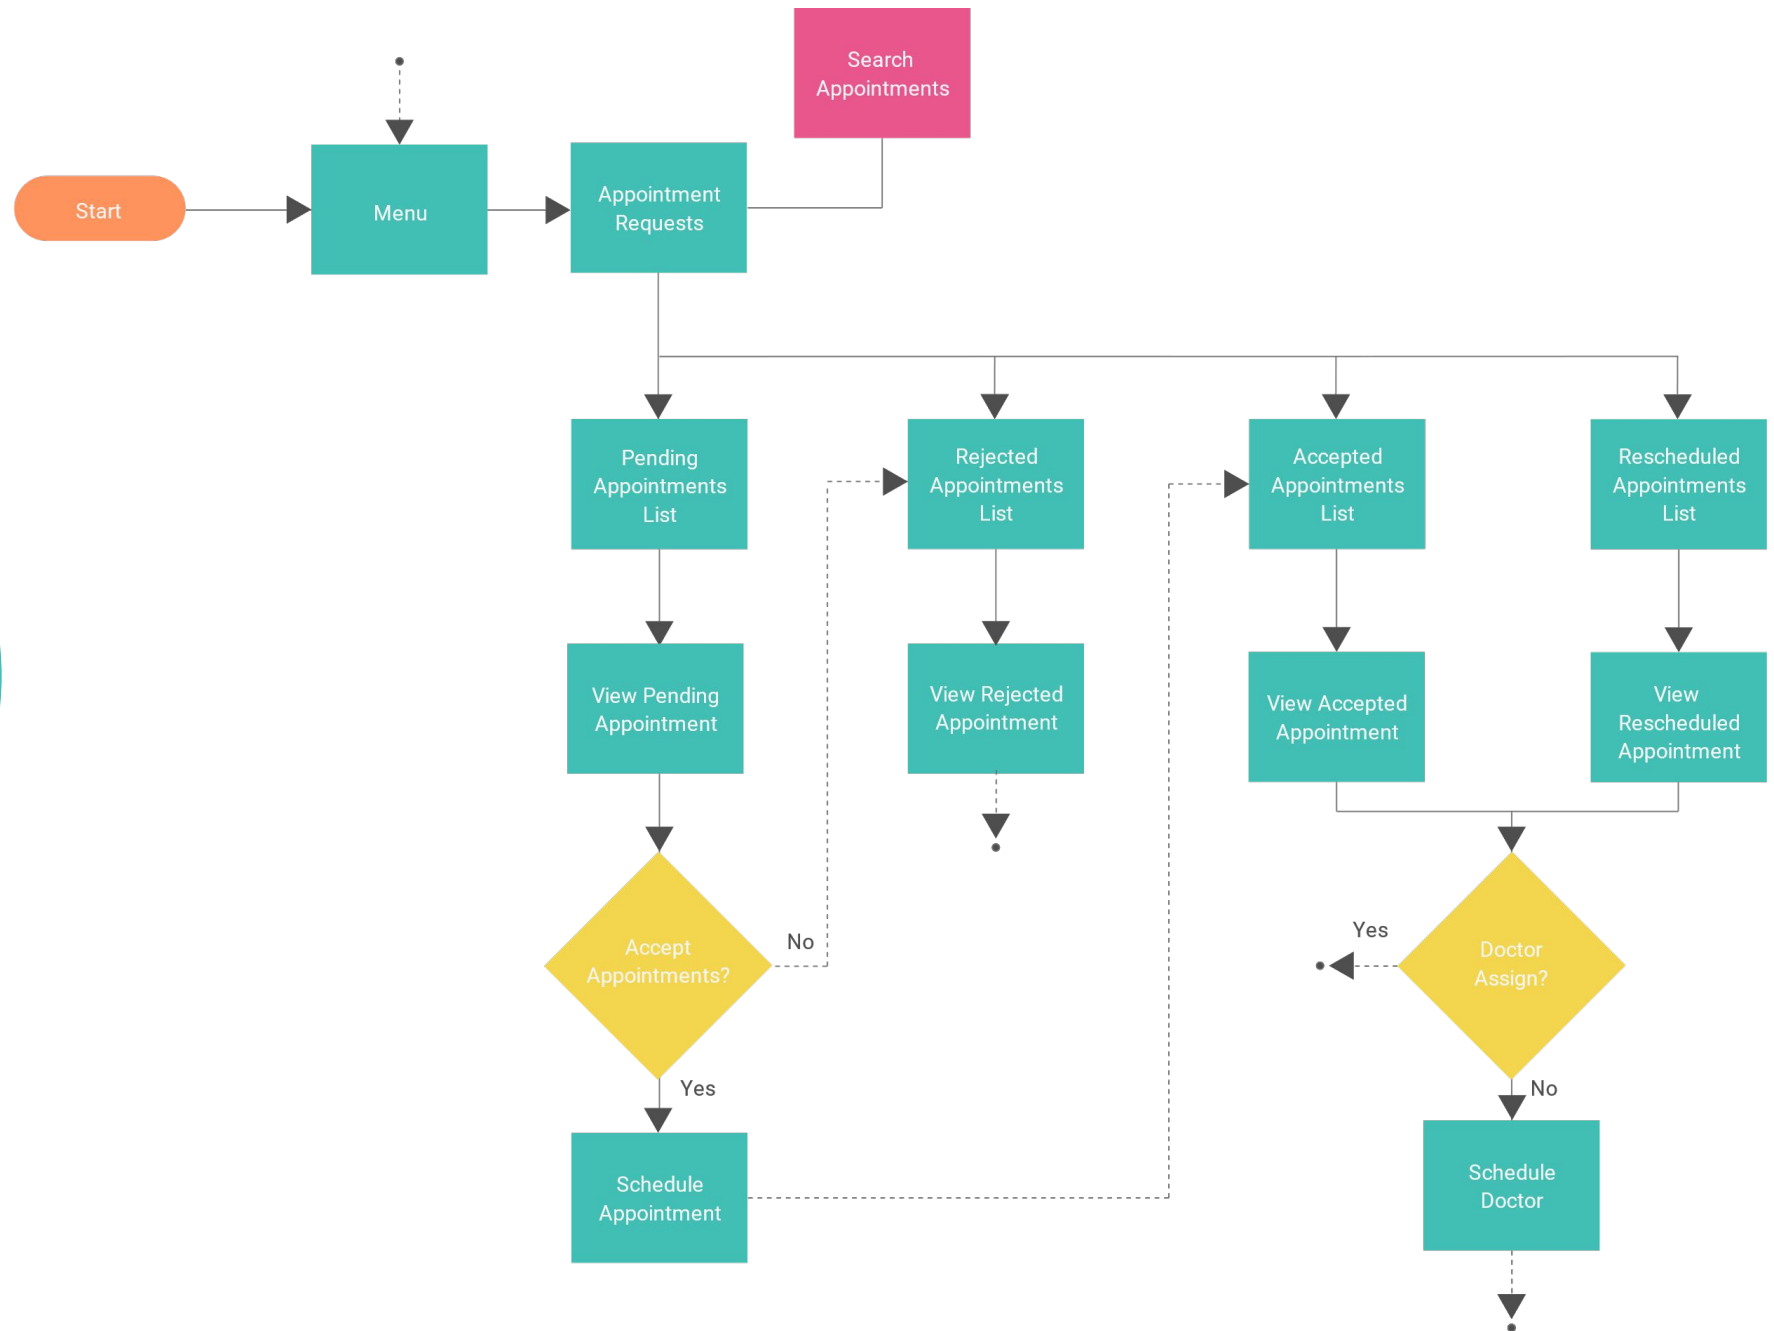

myHalza Appointments Calendar Key Design Feature

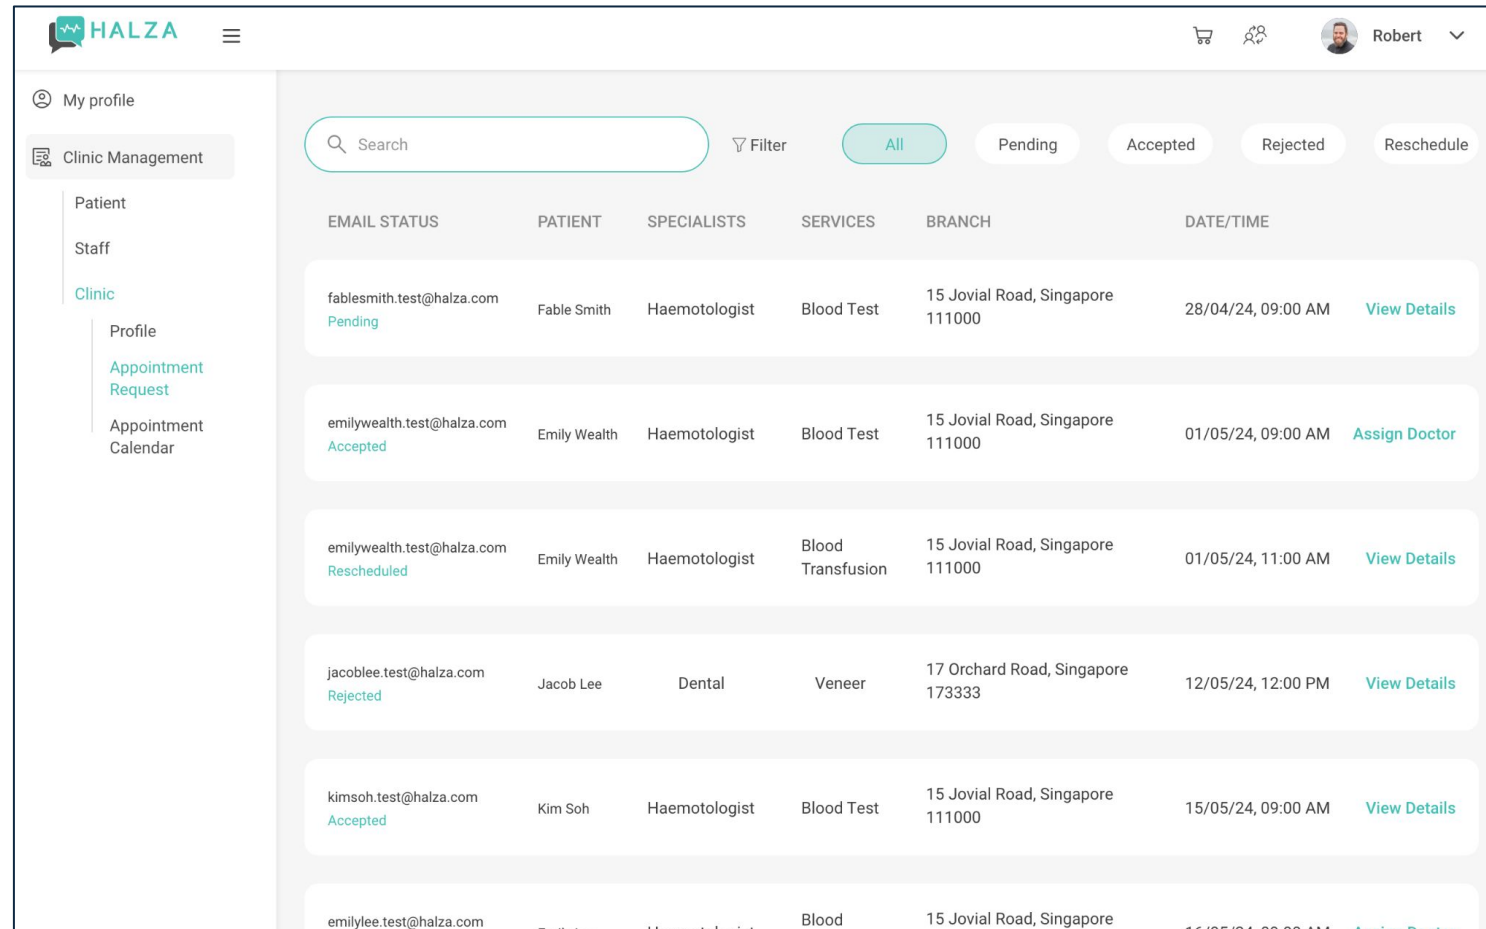

All pending appointment will automatically appear in unassigned doctor at the daily view. Accepted/Rescheduled appointments may also appear here if no doctors are assigned to it yet.

Daily calendar will redirect users to the current date once users accept/reject a pending appointment OR assigned a doctor to an accepted/rescheduled appointment.

myHalza Appointment Request

myHalza Appointments Request Prototype

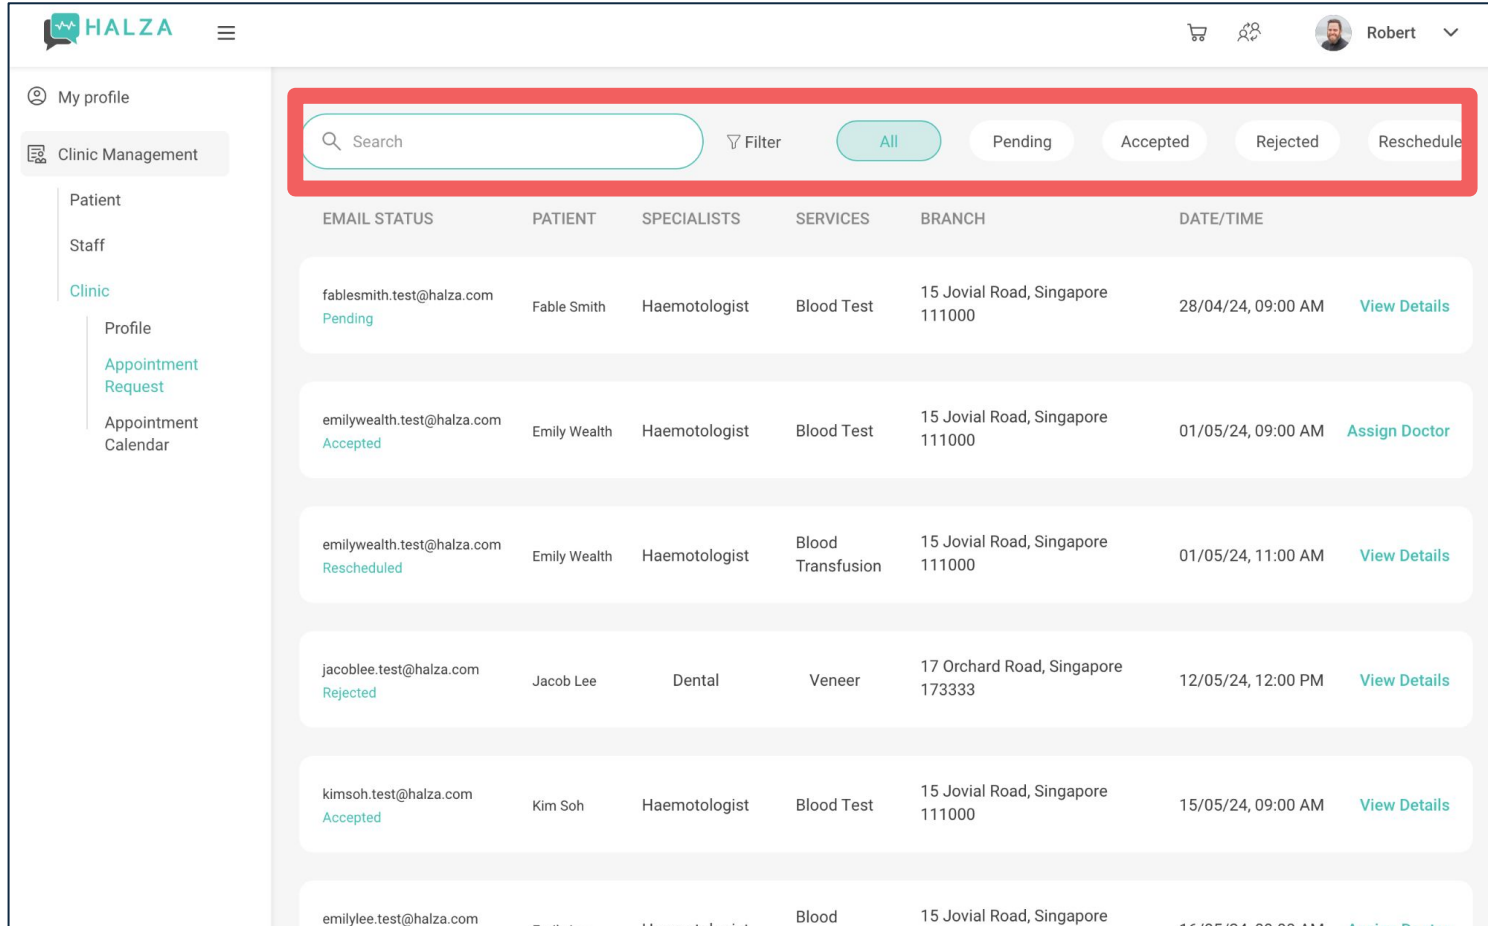

The screenshot displays the myHalza Appointments Request Prototype interface. The top navigation bar includes the HALZA logo, a menu icon, and user information (Robert). The left sidebar contains navigation options: My profile, Clinic Management (with sub-options: Patient, Staff, Clinic, Profile, Appointment Request, Appointment Calendar), and a search bar. The main content area shows a table of appointment requests with columns: EMAIL STATUS, PATIENT, SPECIALISTS, SERVICES, BRANCH, and DATE/TIME. The table lists several requests with their respective statuses (Pending, Accepted, Rescheduled, Rejected) and actions (View Details, Assign Doctor).

EMAIL STATUS	PATIENT	SPECIALISTS	SERVICES	BRANCH	DATE/TIME

Appointment Request shows the history of all appointments that user can filter based on their status, services and search. All appointments will display the status of each appointments, whereas clicking on a specific status to filter won't.

myHalza Appointments Request Key Design Feature

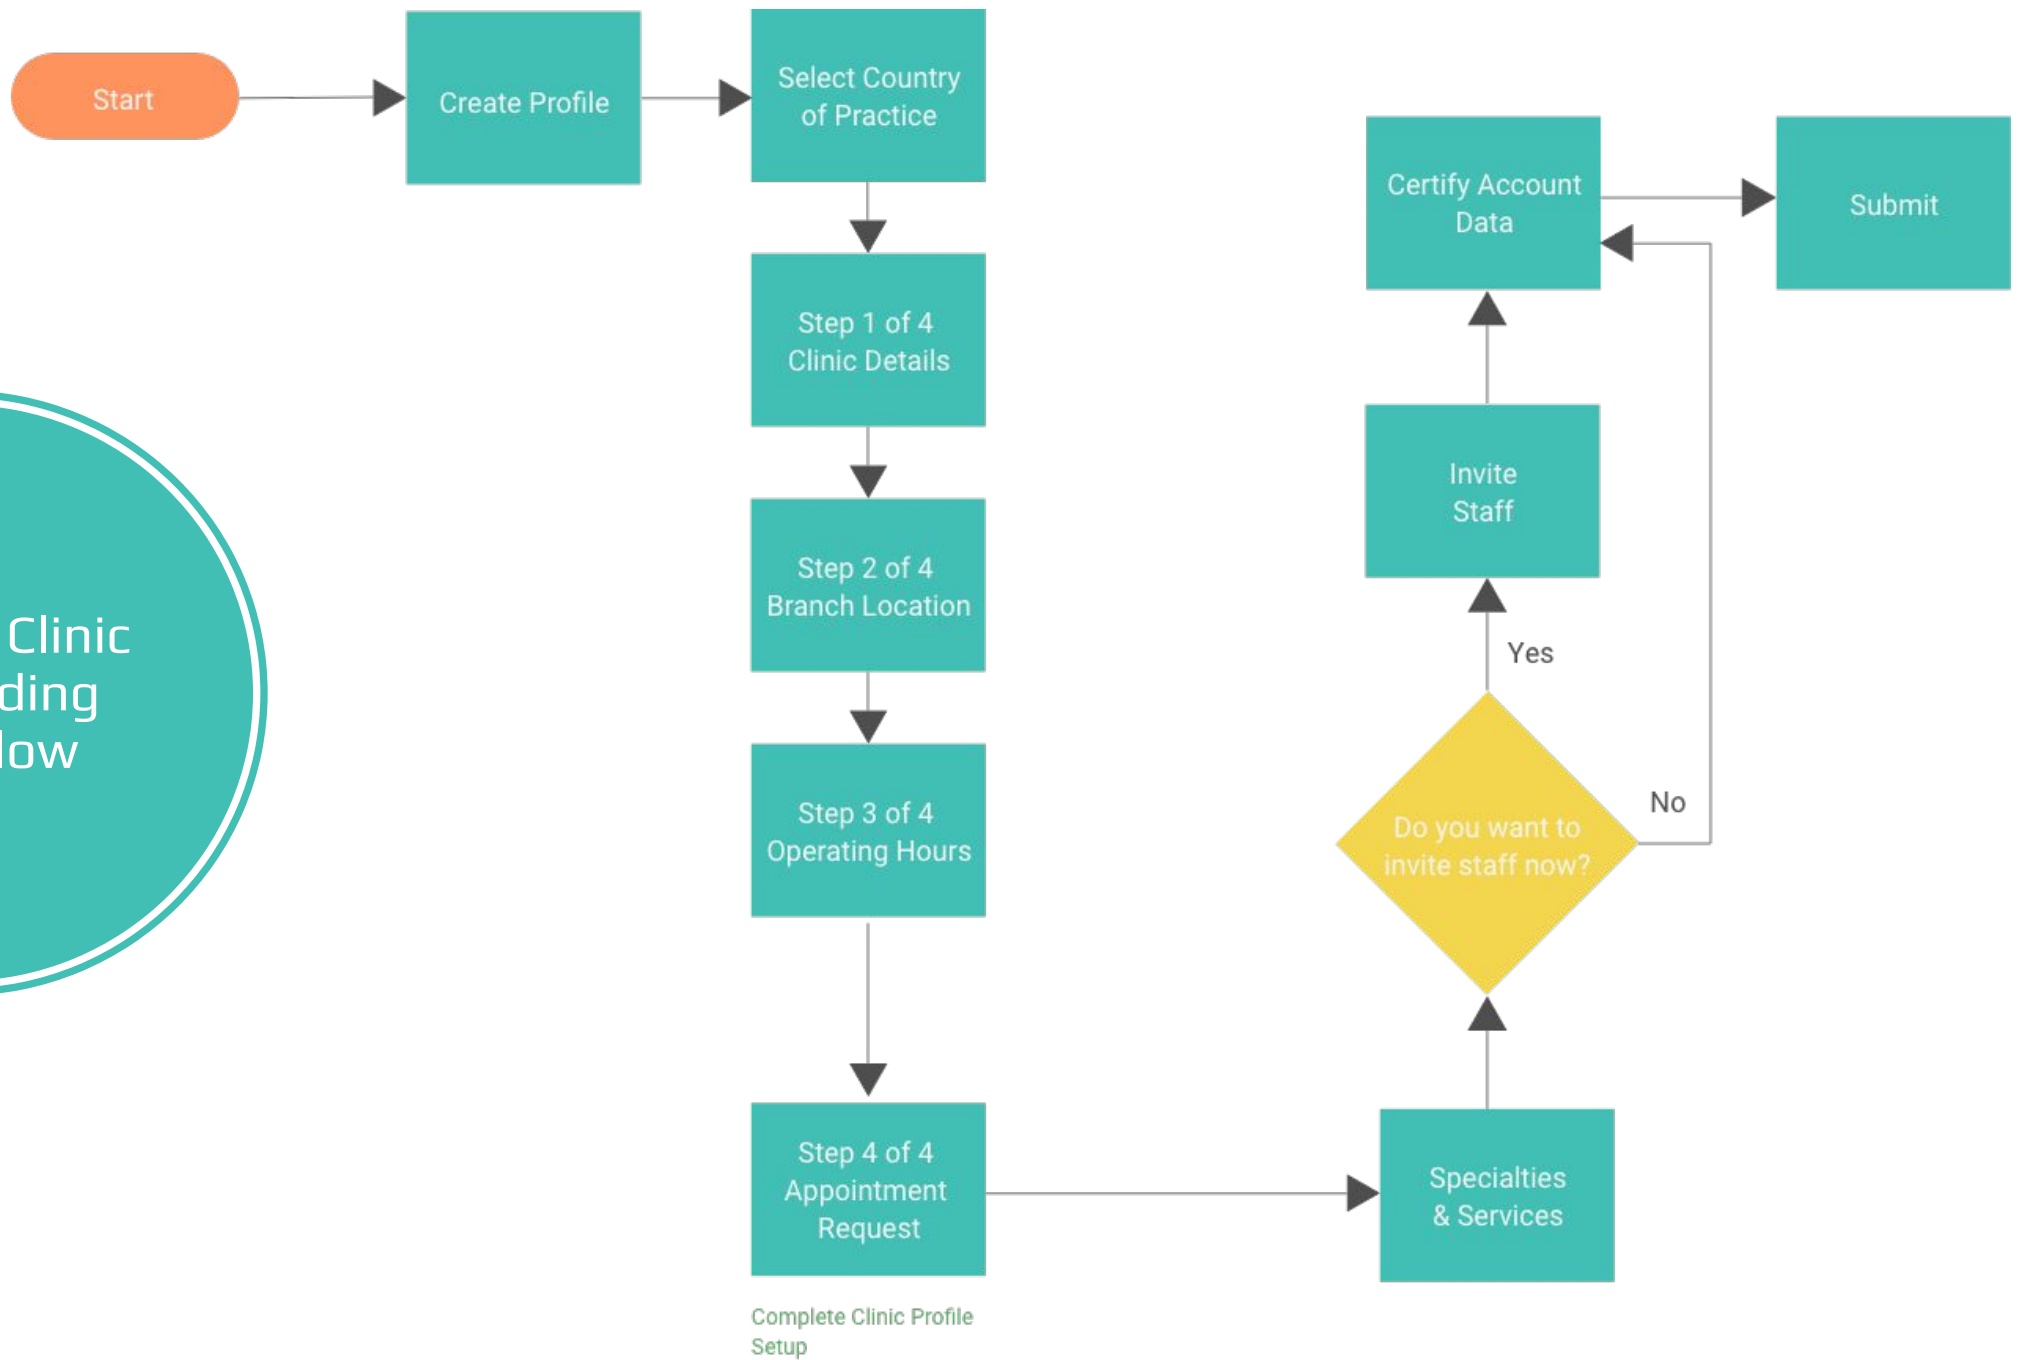

Users can schedule doctor for accepted and reschedule appointments. This option will redirect user to the daily calendar where the schedule is located based on the requested date.

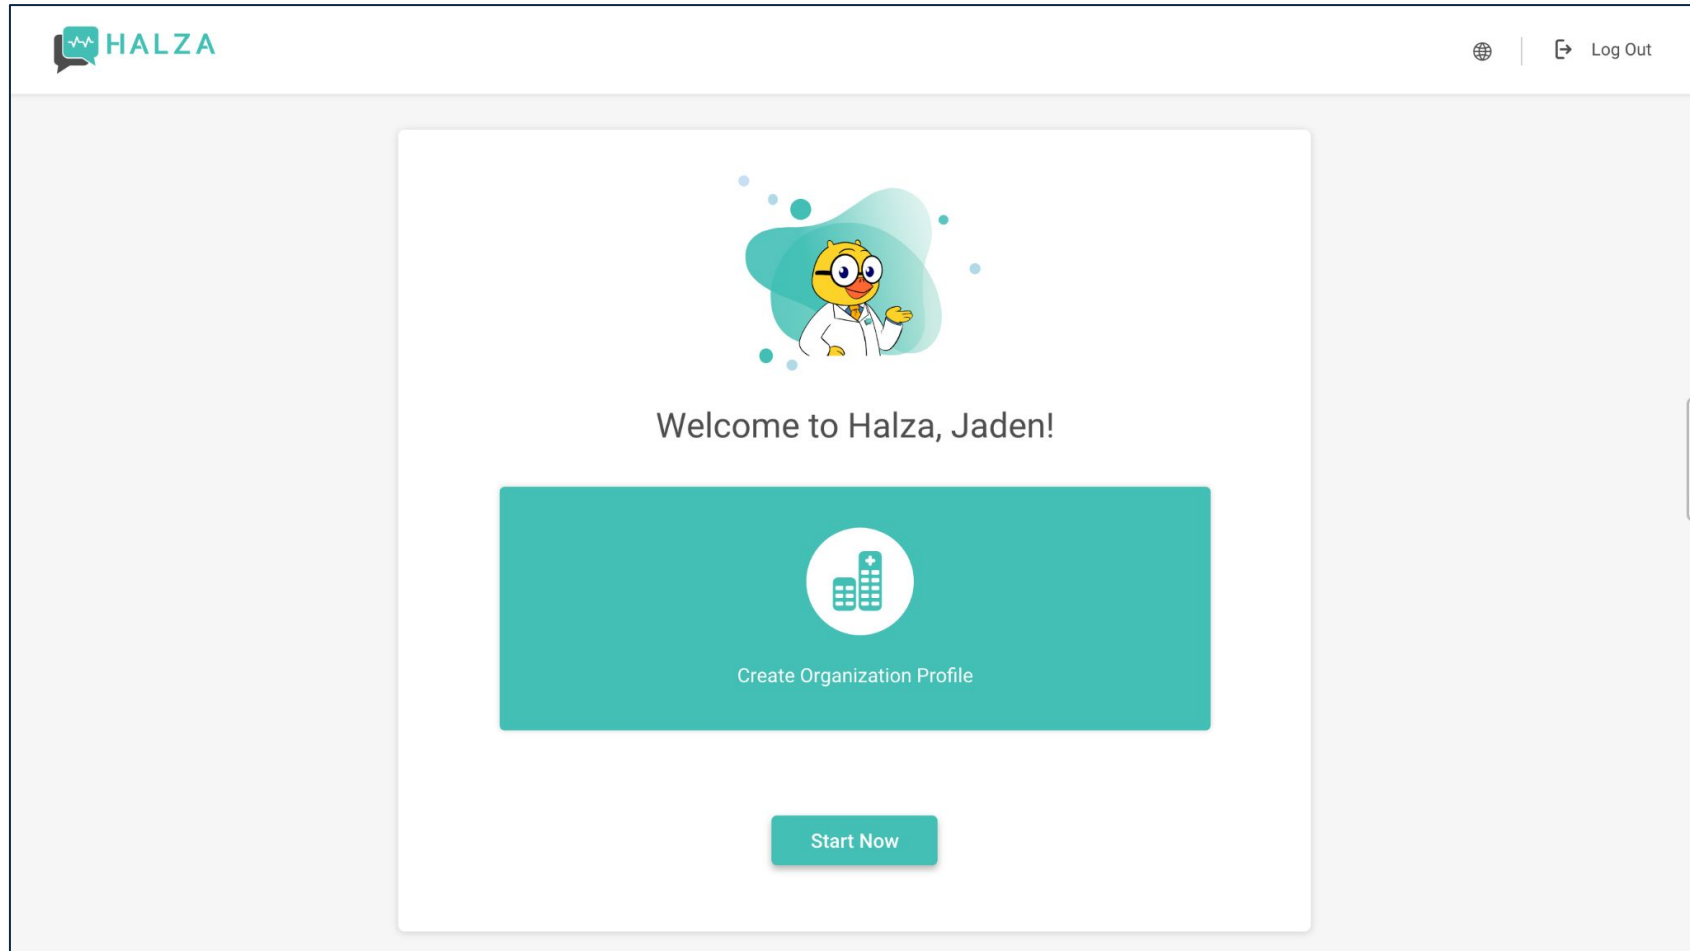

User can view details of all appointments regardless of status, but they cannot schedule appointments for the rejected ones as this option will redirect user to the requested appointment date in the daily calendar.
