

CUPPUCCINO

ABOUT PROJECT

My DES 396 project involves redesigning the brand logo for a real café and developing an app inspired by the logo's theme. Prior to the design, I have obtained permission from the café's owner to use their cafe's name for my project.

Illustration of the logo design on a T-Shirt.

BACKGROUND

Cappuccino is a new cafe that open in the mid 2020 at Kovan Heartland Mall. The cafe is mostly known for their coffee, however they also sell deserts and other meals. After close to a year of operation, the owner was **having trouble running the cafe due to a lack of manpower and difficulty in hiring more staff.**

PROBLEM STATEMENT

How can we create a more manageable work environment for staff in spite of the manpower shortage that they're facing?

SOLUTION

Cappuccino does not have the manpower necessary to run their cafe so I proposed that they should create their own cafe app to improve their efficiency and reduce manpower

With a cafe app, users would be able to resort to online orders and payment instead of having to wait in line to order. This would reduce the manpower necessary to manage the cashier, which allow staff to focus more on meeting customer's expectation. Staff would also spend less time having to wait for customer decision to order their food as some of the customers will resort to ordering at their own table through the app instead.

MOOD BOARD

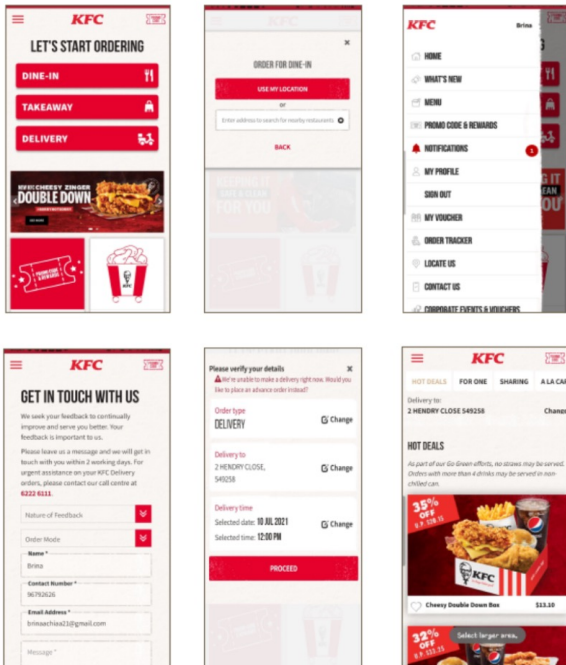

I conducted research to establish the theme by researching the UI of other café apps, before compiling these images into a single mood board.

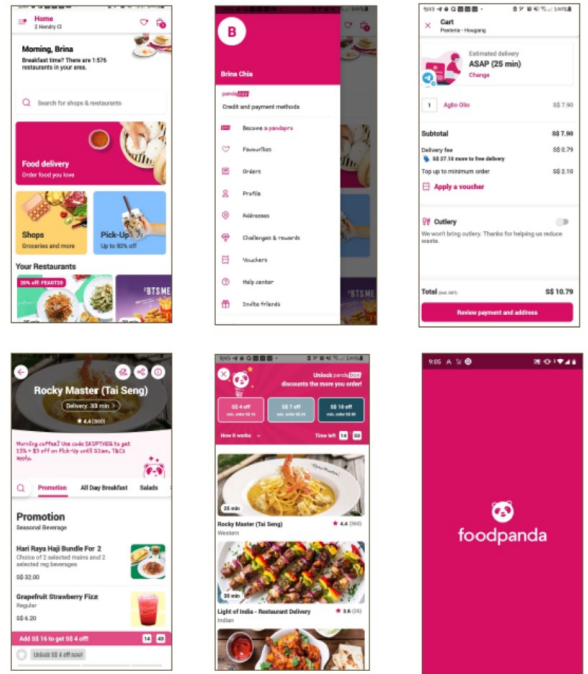

COMPETITOR RESEARCH

I also conducted competitor research of other F&B establishment and took note of the different themes that were applied to the company's app.

Food Panda

Chope

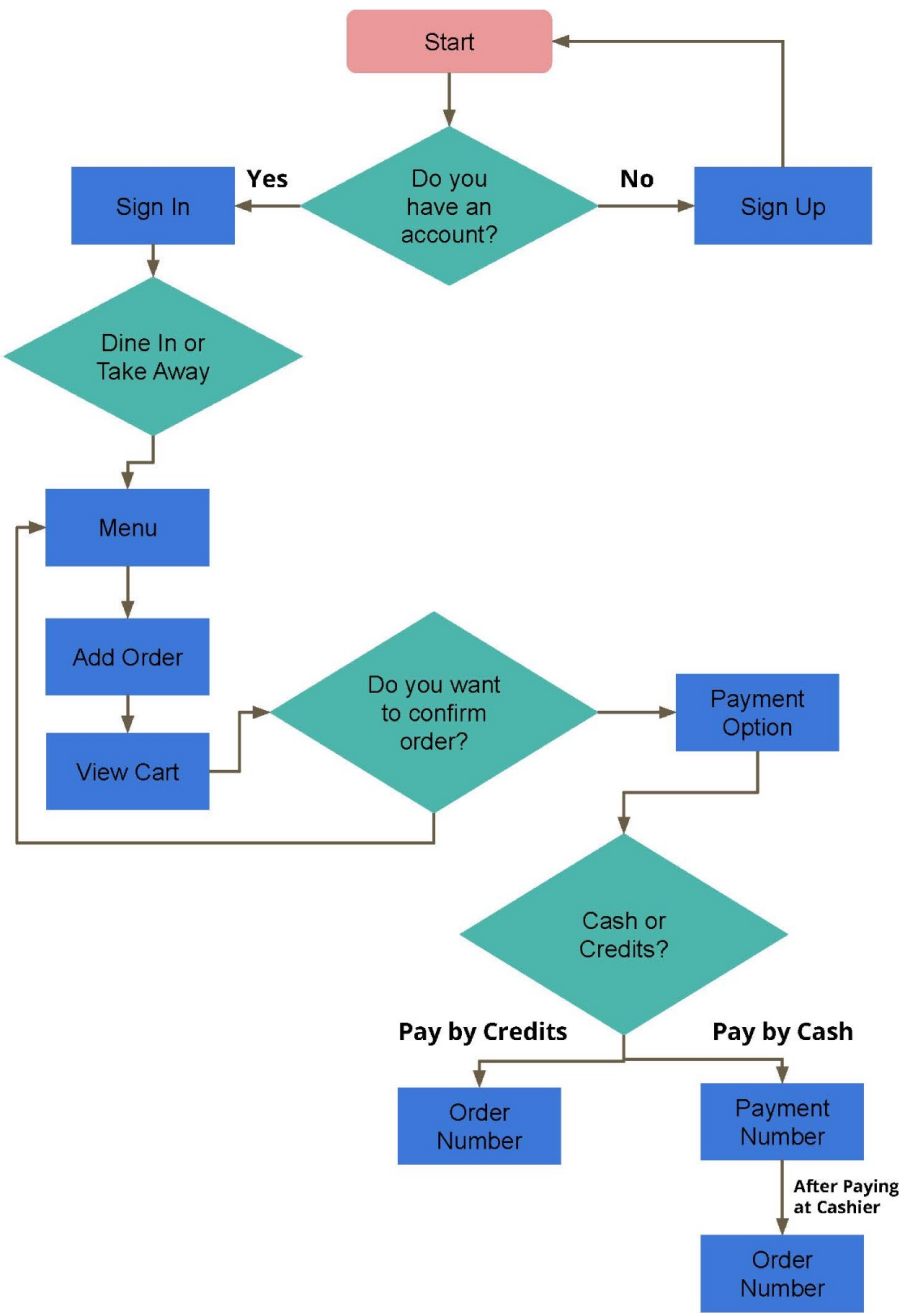

Pizza Hut

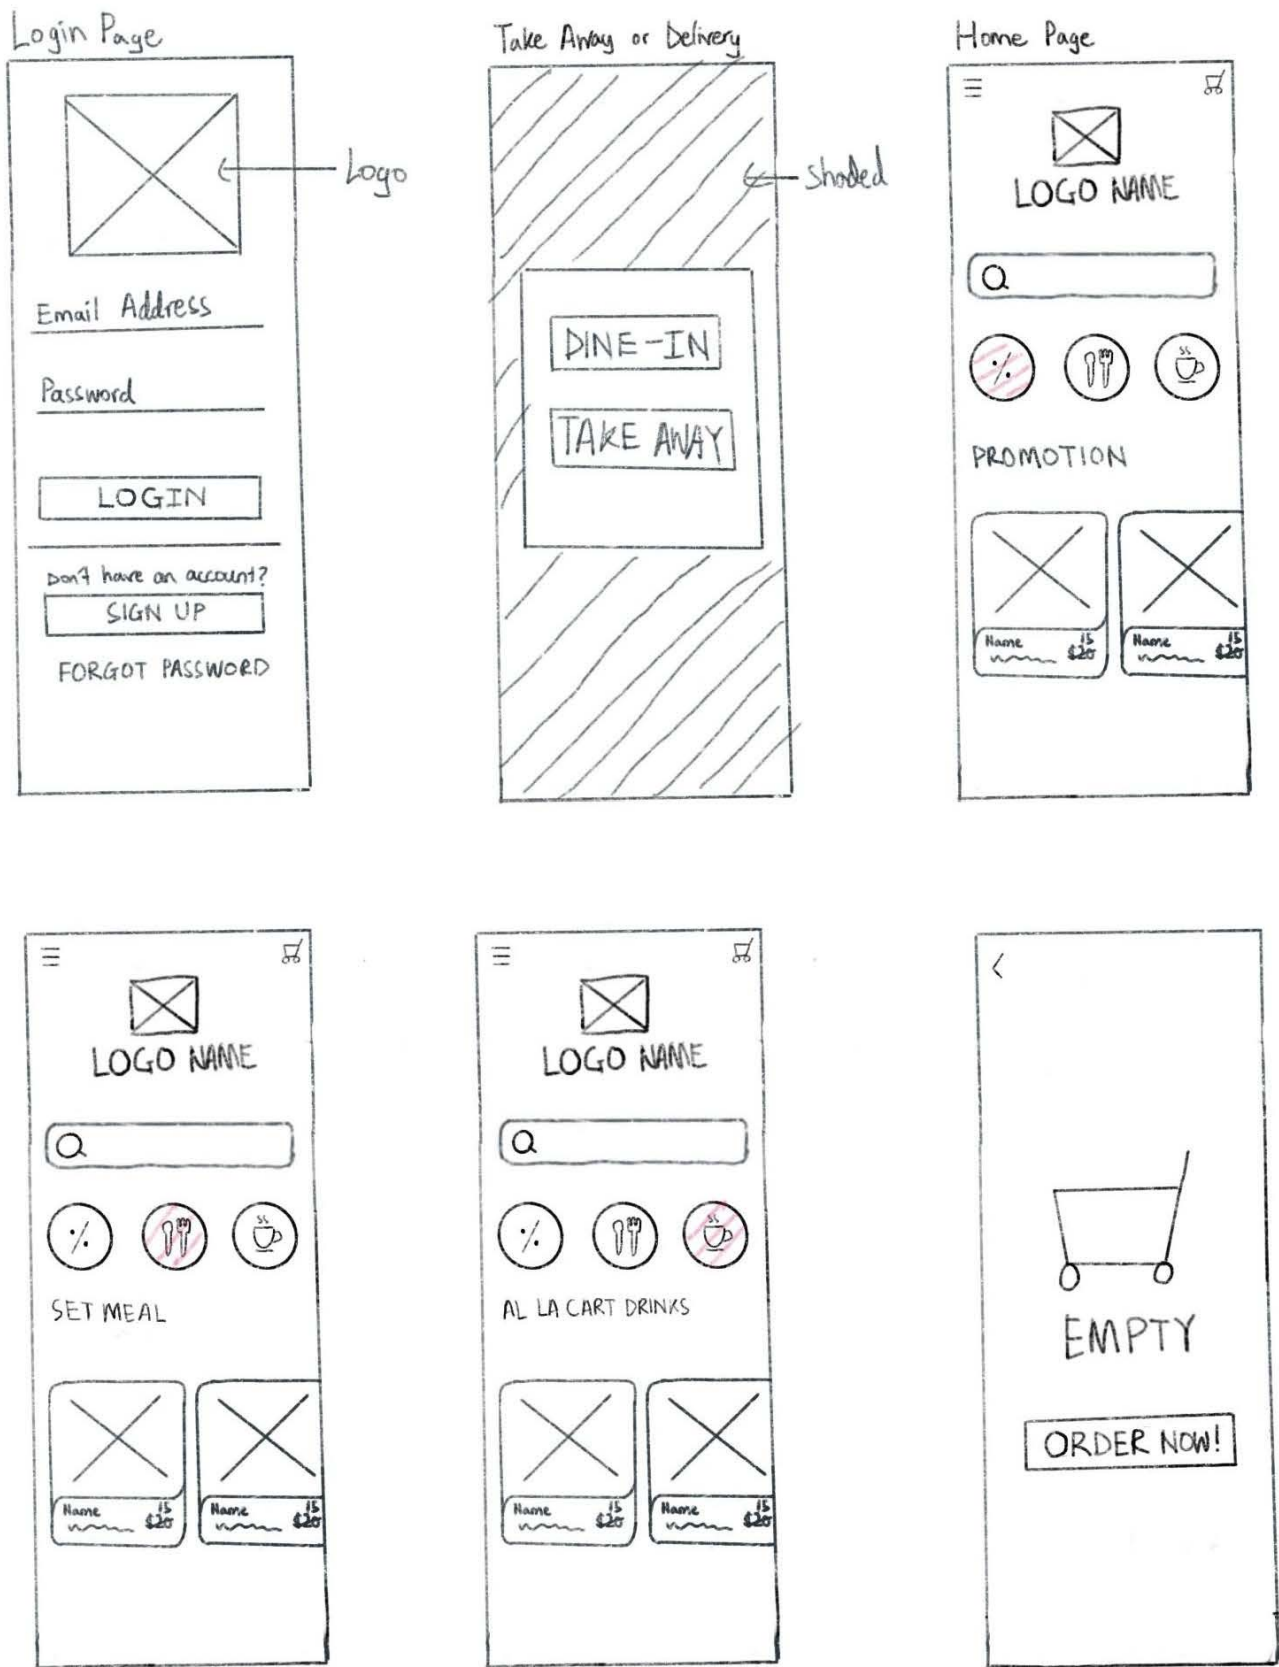

FLOW CHART

After which I interviewed the owner of the café to establish the flow chart of the café app.

SKETCHES & LOW FIDELITY

A low fidelity mock up was then created through sketches to plan the layout of the app.
