DialectNation.SG

ABOUT PROJECT

My group created an educational language-learning app called DialectNation.SG which features a range of games designed to facilitate language acquisition. In this report, I will focus specifically on my individual assignment, which involves the development of five selected pages from the group project's paper prototype.

BACKGROUND

Chinese dialects are becoming a dying language. As the older generation dies out and the younger generation grows older, lesser Singaporeans are able to speak in dialect. [According to CNA, only 8.7 percent of the Singaporeans, age 5 and above, speaks dialect at home in 2020. Which is a significant drop of 5.6 percent in 2010.](#)

PROBLEM STATEMENT

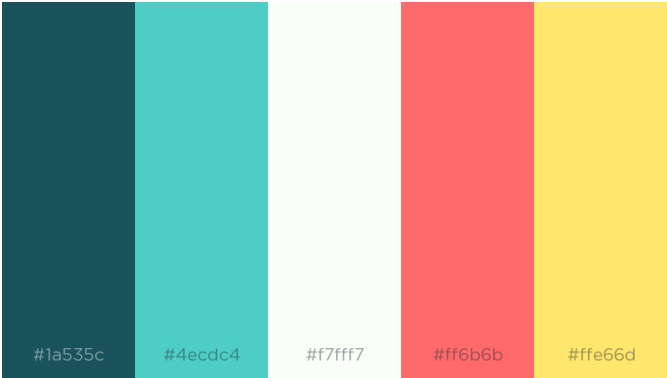

How can we effectively promote and encourage more Singaporeans to learn dialect?

SOLUTION

We can incorporate gamification in our app to encourage and engage them to learn, speak and read dialects. This app will be a dialect learning game app that will focus on educating users on dialect conversation, reading and history through mini games.

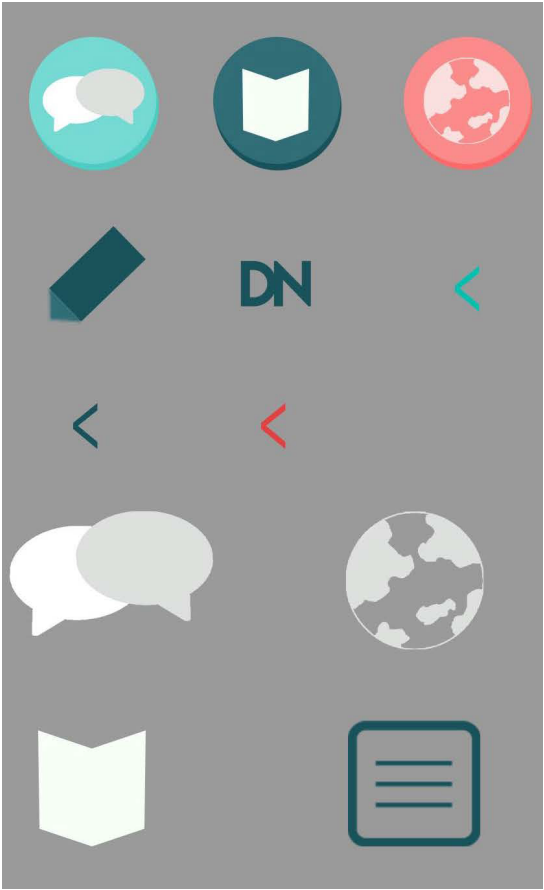

ART STYLE RESEARCH

The art style presented here encompasses the chosen font, color palette, and icons utilized in my high-resolution prototype.

ATOMS & MOLECULES RESEARCH

I had to create new sketches of the atoms and molecules previously used in my paper prototype, and re-imagine them in a more refined "skin" version. This step is essential in mapping out the final design for the prototype.

WIREFRAME & HIGH FIDELITY PROTOTYPE

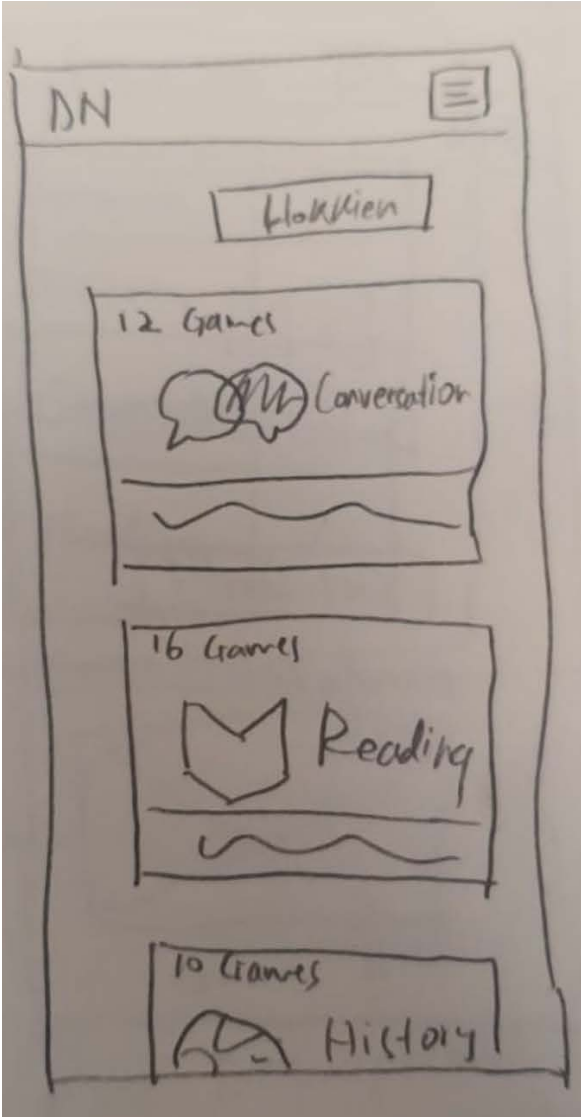

Here's a comparison between the sketches and the final design concept I developed for my project.
